

Color and Typography Basics

Topic: design

Typography and color do most of the visual work on a content site.

Type tips:

- One sans-serif family for UI is enough for most blogs
- Body text around 16â 18px with line-height 1.5â 1.7
- Limit article width (~65â 75 characters) for comfort
- Use clear hierarchy: page title, section headings, body, captions

Color tips:

- Start with neutrals (background, text, muted text, borders)
- Add one accent for links and primary buttons
- Topic chips can use a soft tint of the accent
- Check contrast; dark gray on white beats pure black for long reading

Card UI works well with white surfaces, soft shadows, and a topic badge. Avoid noisy backgrounds behind body text.
